

## DPM Drum: Installing DPM V4.2 PPD : TN 5-R1

How to install the DPM v4.2 PPD or v4.3 PPD.  
This document is for Macintosh OS 8 & 9 users only.

### Apple Systems and Apple Macintosh Clones

- 1) Insert CD ROM labeled *Digital Prepress Distribution Software* into the CD drive of the computer.
- 2) Double click on the Prepress CD icon. You will see a folder named PPDS. Click on the folder for your DPM model, then the Mcintosh folder. This is the Macintosh PPD file (ABDPM42.PPD or ABDPM43.PPD).
- 3) This file needs to be copied to the Printer Descriptions Folder, which is inside the Extensions folder, which is in the System Folder (HardDrive:System Folder:Extensions:Printer Descriptions).

Note: Some applications may require that PPD's be placed in folders other than the Printer Descriptions folder in order for them to be used by that application. Check your applications user manual if this is the case.
