

# Presstek DI® ECO-UV™ Printing

Productive, Economical, Versatile and Profitable

**Easily  
Print On  
Plastics!**

- Low cost entry into the profitable UV printing market
- For Presstek DI digital offset presses
- Easily print on non-absorptive plastics, vinyl and traditional paper and board
- Expands your range of print offerings (i.e. packaging, gift cards, hang tags, labels, tickets and more)
- Instant drying turns jobs around faster
- Rich, vibrant colors on porous stocks
- Superior protection from scratching and scuffing
- UV ink requires less clean up on press, saves time
- Uses less energy, produces less IR heat than conventional UV, saves money

## Presstek DI Digital Offset Printing with ECO-UV: The Best of Two Worlds

Presstek's environmentally friendly waterless DI digital offset presses are engineered to produce fast turnaround, high quality, short run color on a wide range of substrates. The benefits of DI printing are extended with a new ECO-UV system, allowing for printing on plastics easily while accelerating the overall print production process.

### Be More Capable, Profitable and Competitive

A Presstek DI press combined with an ECO-UV curing system opens doors for businesses to differentiate themselves by printing on non-absorptive plastics for POP, credit, membership and gift cards, cut sheet labels or packaging. For businesses looking to enter the growing market of UV printing, a DI ECO-UV press offers a versatile, easy-to-use, all-in-one system that features low cost per sheet in the most frequent run lengths.

### An Innovative, Economical, Compact UV System

Complimenting the Presstek DI's already small physical and environmental footprint, ECO-UV curing lamps are located right in the press delivery and use significantly less energy than standard UV systems. An easy-to-use touch screen for UV controls is integrated on the front panel of the press.

### Save Time, Save Money, Improve Print Quality

UV ink cures instantly and doesn't absorb into the substrate thereby conserving ink and saving you money. The Press Operator will not need to clean ink trays on a daily basis, a significant time savings. Instant curing solidifies color integrity—the color measurement doesn't change. Finally, with ECO-UV colors are rich and vibrant making them not only more attractive, but durable and scratch resistant, impressing your most discerning clients.
