

You may have heard about the recent global cyber-attack which authorities estimated there were 200,000 victims in more than 150 countries (*source: The Guardian*).

Anyone running Windows XP software is more vulnerable to computer viruses and cyber crimes. It's smart for businesses to do all that they can to increase protection.

When it comes to your Presstek equipment, we want you to be protected as much as possible. If your Presstek Momentum RIP or GUI PC is connected to the Internet or a network and you're using a Windows XP operating system (which is no longer supported by Microsoft) you're more susceptible to these types of attacks.

While it is an investment, you can do more to protect your business and help to minimize potential pressroom downtime. Updating from XP and installing updated GUI and MRIP software can help minimize your risk and your downtime. Give us a call to get started.

Receive a no-obligation quote to get your DI Press or CTP equipment computers and software updated.
